Room 16C29 is a 31-workstation computer laboratory in the School of Computing and Mathematics at Jordanstown.

There is a single entrance door from the corridor and two sets of adjoining doors that allow Room 16C29 to be amalgamated with Room 16C28 to form a 31-workstation lab alongside a classroom.

The workstations in Room 16C29 (Dell 9030 AIO) and 16C28 (Dell Optiplex 980) have different hardware and software.

For the lecturer/teacher/demonstrator there is one workstation and projector at the front of Room 16C29.

The student/learner workstations are organised in four rows – traditional classroom style.

The workstations in Room 16C29 use Windows 8.1.
